FORENSIC AUDIO AUTHENTICITY REPORT

Digital Forensics Investigation Unit — AI Voice Analysis Division

Case Identifier:	CASE-20261110-001	**Evidence ID:**	EVID-C97FBF43-linus-to-musk-DE
Exhibit File:	linus-to-musk-DEMO.mp3	**Date/Time (UTC):**	2026-11-10T07:10:01.540674+00:00
SHA-256 Digest:	c97fbf4328367ddd82c527f1bd2b0586...	**Examiner:**	Automated Audio Forensics Unit
Duration / Rate:	60.00s @ 44100 Hz	**Integrity Status:**	**VERIFIED IMMUTABLE**

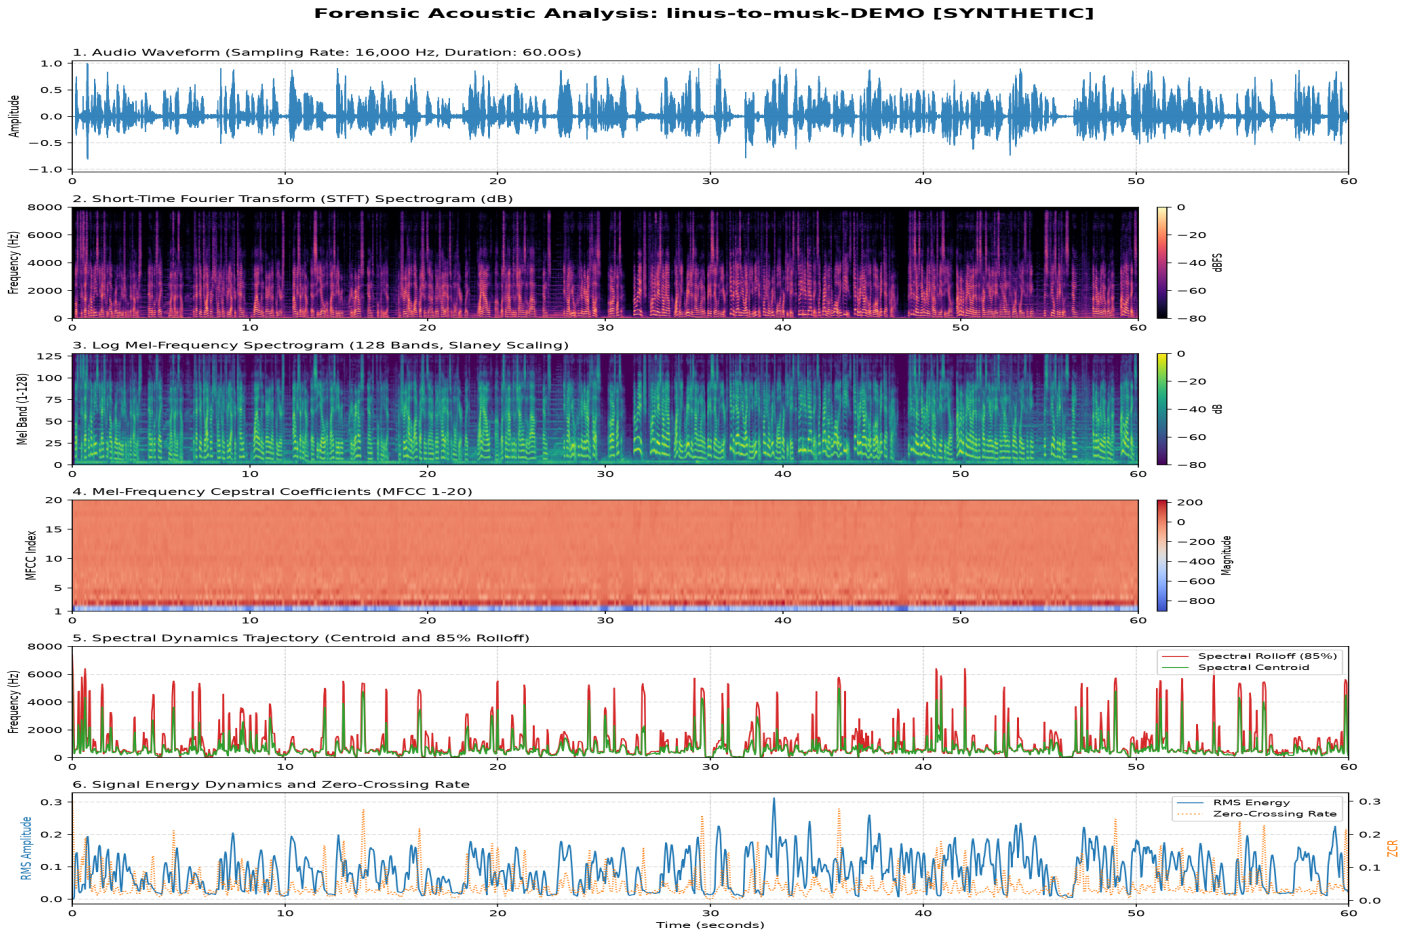

PRIMARY FINDING: SYNTHETIC (Synthetic Posterior Probability: **98.35%**)

Forensic Assessment Statement:
The machine-learning system classified the submitted recording as exhibiting characteristics associated with synthetic speech within the validated evaluation domain (posterior probability estimate: 98.35%). This result is an analytical indicator and does not independently establish that the recording has been manipulated.

Multi-Model Comparison Analysis

Classifier	Predicted Class	Synthetic Probability	Confidence
CALIBRATED_SVM	SYNTHETIC	98.35%	98.35%
RANDOM_FOREST	SYNTHETIC	75.32%	75.32%
LOGISTIC_REGRESSION	GENUINE	45.41%	54.59%

Acoustic Visual Evidence (Spectrogram & Dynamics)

Mandatory Evidentiary Disclaimer

FORENSIC NOTICE: This assessment is an automated investigative screening indicator based on statistical signal processing. In accordance with ISO/IEC 27037 technical principles, it does NOT constitute conclusive legal proof of authenticity or fraudulent synthesis, and must be corroborated by chain of custody, contextual evidence, and expert human review.
