FORENSIC AUDIO AUTHENTICITY REPORT

Digital Forensics Investigation Unit — AI Voice Analysis Division

Case Identifier:	CASE-20261110-001	**Evidence ID:**	EVID-D299A9E4-linus-original
Exhibit File:	linus-original.wav	**Date/Time (UTC):**	2026-11-10T07:23:07.912493+00:00
SHA-256 Digest:	d299a9e4c2c664ea69f03086c7b44c8a...	**Examiner:**	Forensic Analyst
Duration / Rate:	570.36s @ 44100 Hz	**Integrity Status:**	**VERIFIED IMMUTABLE**

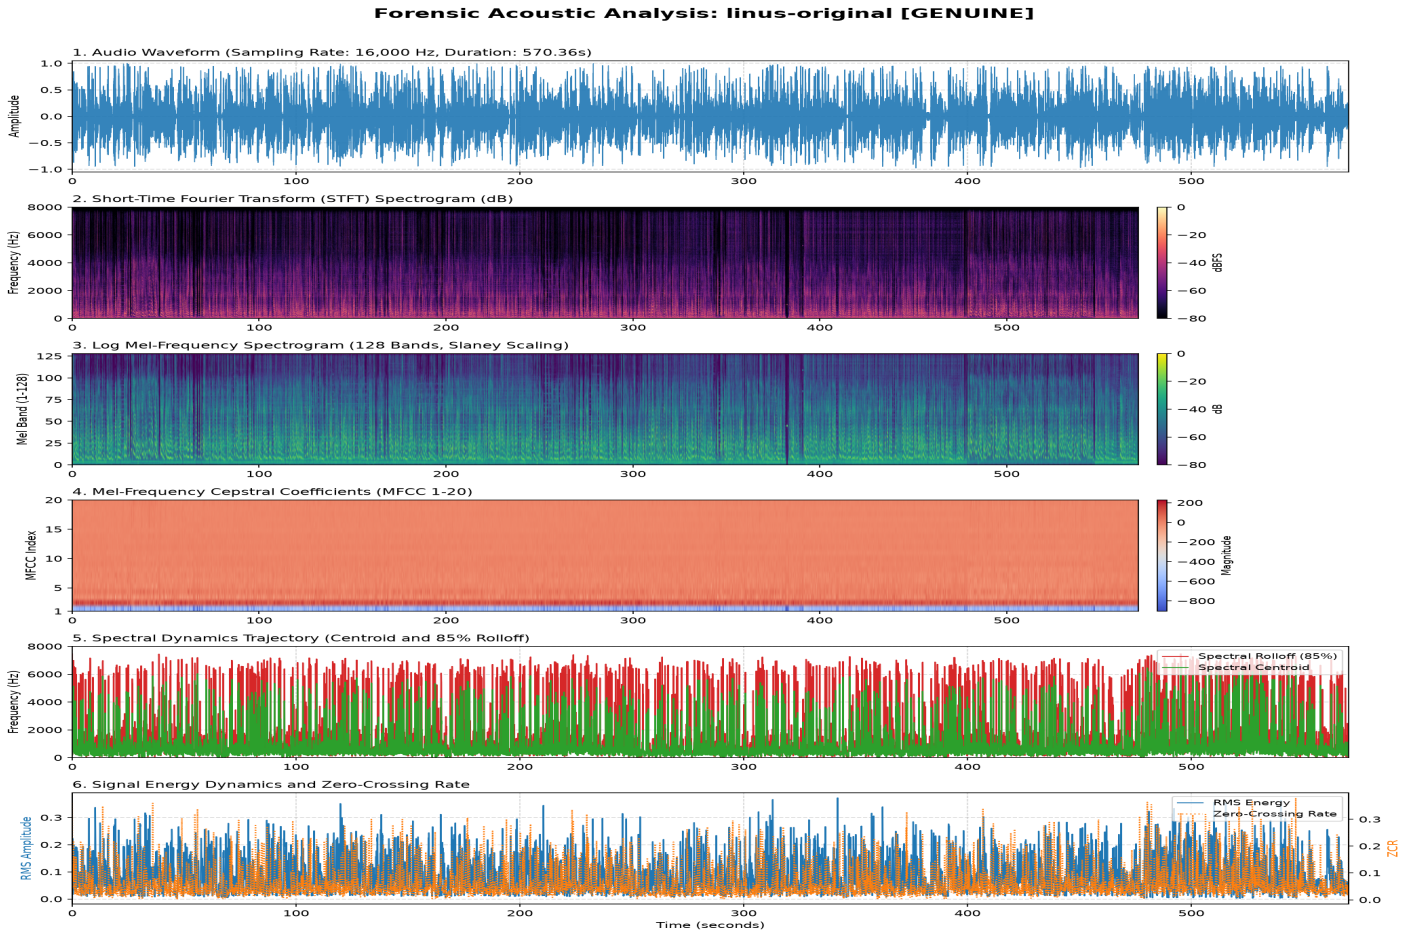

PRIMARY FINDING: GENUINE (Synthetic Posterior Probability: **8.20%**)

Forensic Assessment Statement:
The machine-learning system classified the submitted recording as consistent with genuine human speech within the validated evaluation domain (posterior probability estimate: 91.80%). This result is an analytical indicator and does not provide definitive proof of authenticity.

Multi-Model Comparison Analysis

Classifier	Predicted Class	Synthetic Probability	Confidence
CALIBRATED_SVM	GENUINE	0.52%	99.48%
RANDOM_FOREST	GENUINE	8.20%	91.80%
LOGISTIC_REGRESSION	GENUINE	28.59%	71.41%

Acoustic Visual Evidence (Spectrogram & Dynamics)

Mandatory Evidentiary Disclaimer

FORENSIC NOTICE: This assessment is an automated investigative screening indicator based on statistical signal processing. In accordance with ISO/IEC 27037 technical principles, it does NOT constitute conclusive legal proof of authenticity or fraudulent synthesis, and must be corroborated by chain of custody, contextual evidence, and expert human review.
